The first 10% of the [full text](#) of this article appears below.

Clinical trials are a critical resource for the discovery of new preventive, diagnostic, and treatment methods for cancer. However, current estimates show that less than 10% of adult cancer patients in the United States participate in clinical trials (1). Low trial participation combined with the requirements of larger patient populations per trial and more trials in each study phase for drug approval (2) may . . . [[Full Text of this Article](#)]
